

Abstract

The present invention relates to an improved pharmaceutical composition, in the form of a soft gel capsule resistant to digestive juice. The composition of the present invention is made up of gelatin and an enteric polymer in the form of free acid or its salt, containing used in the treatment of duodenal ulcers, solubilised and / or suspended in a liquid or semisolid medium, comprising the enantiomers of omeprazole such as esomeprazole or rabeprazole or other enantiomers of omeprazole or its salts or derivatives or their mixtures, a hydrophobic carrier, an alkaline inert reacting material and a surface active agent and / or a solubilising agent wherein the resulting capsules being insoluble in aqueous medium up to a pH of 5.5 but quickly dissolving above pH of 6.0. The present invention also relates to a process of preparing the above said pharmaceutical composition.
